

Sometimes called ceiling valves, our Round Ceiling Diffuser range is best used to spread air around the room without creating obvious draught patterns.

Perfect for Toilets and Washrooms, It is incrementally adjustable for airflow from fully closed. Extremely easy to install and does not require a hose clip connector to attach the flex

It allows for smooth quiet airflow that flows out in a concentric pattern across the ceiling to provide good coverage in both cooling and most heating applications. Can be used for both extract or supply systems.

Manufactured from high impact ABS for long term strength and rigidity. It is fully adjustable by rotating the centre cone from total shut off to fully open.

The standard colour is off white, the outer surface is lightly etched to reduce reflection and fit unobtrusively with most decors.

Features

- Easy one touch adjustment for air flow control
- Large mounting flange for ease of installation
- Easy fitment with 4no snap clip fixings
- Removable inserts for cleaning
- Connects straight to flex/solid duct
- Suitable for wet areas
- Easy to clean and non-reflective
- Comes with cut out template

4-no clips snap shut when diffuser neck is pushed into the template hole. The clips bite the plasterboard to hold the diffuser in place.
